

Cherish Water Campus

惜水學堂

ISSUE 16
DEC 2021

Hi everyone! The award list of "Cherish Water Campus" Integrated Education Programme - Primary School (school year 2020/21) has been released. 16 schools received Gold Award, 7 schools received Silver Award and 5 schools received Bronze Award. NTWJWA Christian Remembrance of Grace Primary School in Tai Po district won the Grand Champion. Congratulations to all awarded schools, teachers and students. Thanks for your dedication in advocating water conservation education while facing COVID-19 pandemic for over a year.

Happy Water Saving School

NTWJWA Christian Remembrance of Grace Primary School (the School) newly joined "Cherish Water Campus" Integrated Education Programme - Primary School (IEP) and won several IEP awards for the 2020/21 school year (see the table). It is noted that the School had organised over 20 activities related to water conservation amid the COVID-19 pandemic.

Mr. Poon Cheuk Yin, the planning teacher, pointed out educating students to develop a water saving habit was the fundamental for moral education. The School incorporated water conservation related messages into the curricula of various subjects and held lots of interdisciplinary competitions in order to raise their awareness. The activities not only met students' needs, but also helped to unleash their potential and encouraged them to put their knowledge of water conservation into practice at home and in school. The teachers had also benefited from planning and implementation of IEP. We appreciate the great effort from principal, teachers, students and parents.

— Mr. Poon Cheuk Yin

Students understand the importance of cherishing water resources by taking part in different activities organised by the School

Awarded teachers and students

Sharing from Water Conservation Stars

NTWJWA Christian Remembrance of Grace Primary School
Ngan Sik

Water is essential to all forms of life. We should protect water resources for sustainable use of water in the future. Water, animals, plants and human beings are interdependent. Human beings are unable to survive without water. So I hope everyone can cherish the valuable water resources.

NTWJWA Christian Remembrance of Grace Primary School
Wong Fung

We should cherish water and avoid wasting precious fresh water. Therefore, I will use a sand timer during shower as a reminder to limit my water usage.

NTWJWA Christian Remembrance of Grace Primary School
Lui Yin Huen Keelia

Do you know that some children have to give up study in order to strive for water due to drought? However, some people are still wasting a lot of water for bathing. It is unforgivable!

Guide Tour to Ex-Sham Shui Po Service Reservoir

In June 2021, the Ex-Sham Shui Po Service Reservoir (Ex-SSPSR) was accorded a Grade 1 historical building status by the Antiquities Advisory Board. WSD has already launched a virtual tour of the service reservoir. Now we allow restricted opening of the service reservoir for visiting by the public. The visiting programme will be conducted in the form of guided tours with a view to enhance public's understanding of the historical background and appreciate the internal structure of the Ex-SSPSR, so as to increase public's awareness on conservation of historic waterworks buildings and heritage. The Guide Tour recently opens for booking. Due to overwhelming response to the application, the visiting sessions for Guide Tour between 15 Dec 2021 and 28 Feb 2022 are full at the moment. If you are interested to join us, please enroll via online booking system on 4 Feb 2022 at 9 am.

Details

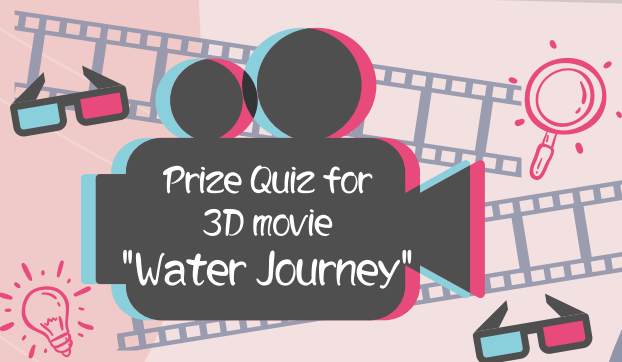

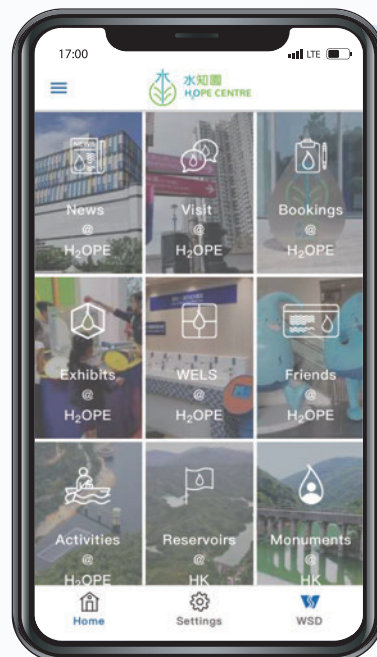

H₂OPE CENTRE Mobile APP is now available

H₂OPE CENTRE is an education centre set up by WSD. It brings out educational messages about Hong Kong's water resources and water saving through various interactive games and exhibits. The H₂OPE CENTRE mobile application provides booking and guided tour functions to facilitate visitors participating in various activities of the centre. More functions are listed in the following:

- Online booking and other visit information
- Introduce the content and activities of the exhibition area through the app
- Through the "WELS Shopping Challenge" in the app to understand their water usage
- Provide an introduction to Hong Kong's reservoirs with pictures and descriptions
- Register as a member of Friends of H₂OPE CENTRE and participate the center activities
- Introduce the Hong Kong's waterworks monuments and the biodiversity in Hong Kong's reservoirs; understand and protect the historic sites and biological species in Hong Kong's reservoirs
- Provide water saving tips and educate the public to cherish water resources

This app provides English, Traditional and Simplified Chinese.

| • Name | • Contact information |
| • Class | • Date of watching movie (DD/MM/YY) |
| • School name | • Answer |

Deadline

28 January 2022

[1] Only the first 30 of the quiz participants sending in the email with all answers correct will be notified.

[2] The personal data provided will only be used for the Prize Quiz for 3D movie "Water Journey" purpose. It will be kept confidential and will not be disclosed to any third party. You have the right to request in writing to check whether WSD is keeping your personal data, to access or correct it, and to enquire about our policy and procedures in the use of such data as well as the types of personal data we are keeping. The above terms do not affect your rights as set out in the Personal Data (Privacy) Ordinance.

1 Why Water Save Dave had been frozen in the movie?

- a) Because Water Save Dave was sent to refrigerator
- b) As the altitude of the aircraft continued to decline and the temperature reached above freezing point, Water Save Dave condensed into ice crystals
- c) As the altitude of the aircraft continued to rise and the temperature reached below freezing point, Water Save Dave condensed into ice crystals

2 Why did WSD use zebrafish to monitor the water quality in the movie?

- a) They were highly sensitive to contaminants in water
- b) They changed color to match surroundings
- c) They had strong vitality

3 Why did the pollutants adhered by the bubble and brought up to the water surface in the movie?

- a) Because the growth rate of pollutants was slow
- b) Because Alum was added into Dissolved Air Floatation adhere to suspended matters in water and brought pollutants to the water surface
- c) Because the bubble involved negative ion which easily brought the pollutants to water after heated

4 Where did Manpo disappear in the movie?

- a) The entrance of Water Treatment Works
- b) Dissolved Air Floatation
- c) The maze of anthracite inside the filter tank
