

Game-7 Different Types of Water Taps

Objective:

By using imagery to give students a better memory on the four common types of taps, students are led to think about the features of each type of tap and how to correctly use them to achieve water conservation. Hopefully students can observe and think more about the adoption of different water-saving measures in our daily lives.

Teacher may make use of the following material:

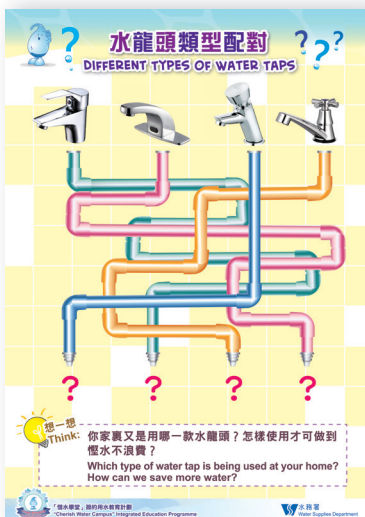

P3: Topic 8 Ways of Saving Water - Lesson plan and worksheets

How to play:

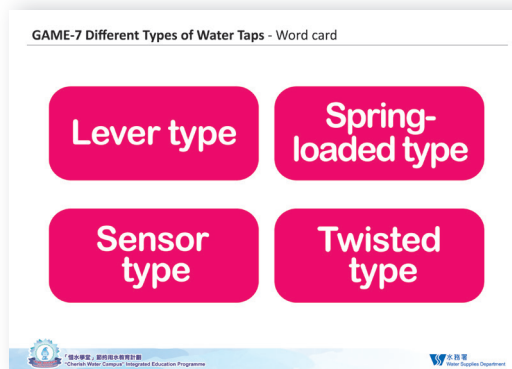

Students have to identify different types of water taps, and then to match the name of the tap according to the path of the water pipes. Because different taps will possess different features, the teacher can lead students to discuss on how to save water by using different types of water taps.
