

# Game-10 Fresh Water Consumption Pattern

## Objective:

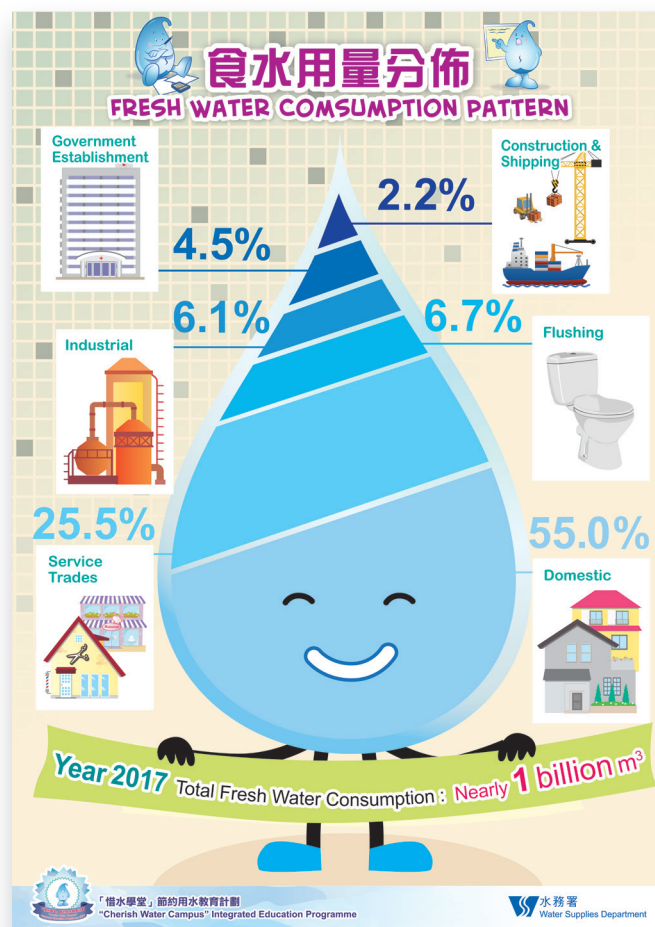

This game aims at enriching students' knowledge on the ratio of water consumption in various sectors (e.g. domestic, services industries, industrial etc.). Students can easily understand the huge amounts of water consumed in the domestic sector and service industries through images, which accounts for more than 80% of the Total Fresh Water Consumption in Hong Kong. This activity can motivate students to start saving water from their homes, thus influencing their family members, and to extend the impact outwards.

## \* Reference materials \*

Teacher may make use of the following material:  
**Teaching video: Topic 1 A Precious Water Resource (KS1 & KS2)**

## How to play:

Students may first discuss on the water consumption of various sectors and their corresponding ratios, then stick the Image Cards onto the poster according to their corresponding ratios. Lastly, the teacher can explain the difference in water consumption in various sectors, and remind students to cherish the precious water resources when using water outside of their homes.
